Phillips Exeter Academy has recently updated the campus wireless systems to support secure encrypted wireless connections. This was done to provide a level of network protection to our campus users when they attached to the campus wireless network. Wireless encryption limits the ability of unauthorized “sniffing” of network traffic, and helps to prevent credential gathering and account compromise. The following instructions will help you attach securely to the campus wireless network. You need only perform these steps once and your computer will retain them.

1. Select PEA-Secure from the Wi-Fi status drop down on the menu bar

![Wi-Fi status drop down menu](image)

2. You will be automatically prompted to login. Enter your network credentials

![Login prompt](image)

3. Click the continue button to accept the certificate

![Certificate verification](image)
4. You may be prompted for your systems login credentials to save your Certificate Trust Settings

5. Launch your Internet browser. You should be automatically directed to the Phillips Exeter Academy Network Registration page, in which will need to follow the prompts to register your computer.

You should now be securely connected to the campus wireless network.

**Note:** When you change your network password, you will be forced to reenter your new password for the PEA-Secure wireless network.

If you have questions or difficulty completing these steps you can contact or visit the ITS Support Desk and we will assist in the configuration.
